

4.50 metre long Plywood Motor Launch.

Designed around the small petrol engines still available, this is a good sized craft for day trips or overnight camping expeditions in and around sheltered waterways. It is also a convenient size to build, trail and launch or retrieve. Four people can fit comfortably and it would make an ideal fishing boat for two.

Construction features marine grade plywood planking, 10mm thick, with dynel on the exterior, and Oregon frames, floors and longitudinal members. The decks are 8mm thick plywood. An amateur builder with reasonable skills could put this boat together with little fuss, there are no particularly difficult tasks to undertake.

With the 5hp Donk engine it is quite possible to reach about 5 knots, or cruise along at a more leisurely pace to suit the occasion.

Plans include lines, construction and arrangement plans and a sheet of full size templates for the mould stations and stem profile.

LOA 4.50m
Beam 1.65m over gunwales
Weight on trailer 450kgs approx
